Executive Summary

What the report is about

Strategic communication company Seftons was engaged by the Fisheries Research and Development Corporation (FRDC) in June 2017 to undertake a five-month communications program, managing communications strategies and activities for the National Carp Control Plan (NCCP). The program built on recommendations in the National Stakeholder Engagement and Communications Strategy developed by NCCP in early 2017.

Seftons ran a five month program of communication and engagement activities including developing key messages, devising an implementation calendar, producing marketing communications collateral, developing stakeholder engagement materials, running an extensive media relations campaign, providing social and digital media material and recommendations, providing information and advice for the website, and managing risk and issues in media coverage. Seftons also introduced the NCCP to the 'Bang the Table' online engagement platform to improve stakeholder engagement.

This document reports on the activities taken and the outcomes achieved, for the information of FRDC. It is not a report of research findings.

Seftons is reporting separately on the stakeholder engagement program, and the process of community consultation (including stakeholder workshop results and recommendations). The three reports will form a summary of all the work undertaken by Seftons for the NCCP in relation to communication and stakeholder engagement.

Background

Seftons was contracted to deliver this project after some early issues with conflicting messages released by the Federal Government and the NCCP earlier in the year. This communication program was designed to re-align the messaging, ensure the necessary foundations were laid with key stakeholders, and that stakeholders understood the purpose of the NCCP, its objectives, and scope of work.

Aims and objectives

The overarching aim of this program was to inform and communicate to stakeholders about the NCCP, provide opportunities for community input, and build community and industry support and endorsement for the recommendations in the final report.

Methodology

The methodology was straightforward – it involved preparing a strategic communication plan and stakeholder matrix building on the NCCP's National Stakeholder Engagement and Communications Strategy. The plan was then implemented by Seftons, which:

- Managed and tracked the project
- Devised the implementation calendar

- Developed themes and key messages
- Executed the media relations campaign
- Oversaw communication risk and issues management
- Produced the NCCP newsletter
- Provided materials to update the website
- Provided materials for digital and social media
- Produced communications collateral
- Produced stakeholder engagement materials
- Commenced engaging with stakeholders
- Coordinated production of animated videos
- Managed the Communications Working Group
- Introduced 'Bang the Table' engagement software.

Results

All NCCP communication activities were aligned and consistent, using the program's key messages. The media relations component, which involved 40 media releases/alerts, achieved a high level of national, state and regional media exposure throughout the project, with approximately 353 media items generated from 30 June 2017 to 30 November 2017 across print, broadcast and online. This equated to an estimated value of \$609,276 in advertising value and at least **\$1,827,828** (\$1.83 million) in editorial coverage. Ninety per cent of media coverage for the program was positive or neutral. Stakeholder relationships were established and consultation processes rolled out successfully.

Implications for relevant stakeholders

- The media tends to reports positively regarding the work of the NCCP and its objectives (90% of articles were positive or neutral).
- However, overall awareness of the issue outside specific stakeholder groups remains relatively low.
- The demographic of men (aged 40+) are most engaged with the program, with a second tier of younger male recreational fishers also engaged.
- Males are more supportive than females regarding the virus release (77% of male residents living in the Basin supported virus release compared to 63% of female Basin residents).
- While the focus of communication to date has been the research projects and planning underway, participants in the recent Victorian workshops all rated 'recovery of rivers' and 'clean up strategies' as the most important aspects of the NCCP moving forward.

Recommendations

- The NCCP should broaden its communications reach to ensure the issue of carp is on the national agenda. It should build on the targeted media approach from 2017 and consider national and metropolitan media opportunities to help 'tell the story'.
- The 'hearts and minds' opportunity should be the strongest approach for 2018 there is a fondness for waterways and communications need to position the NCCP as responding to this sentiment.
- The NCCP should position its work as world-class best practice, which is being viewed with interest by international counterparts.
- Communications tactics need to be traditional and conservative. Stakeholders have an overwhelming preference for ongoing communication from the NCCP in the form of Enewsletters and traditional media (local newspapers, radio). Social media is significantly less popular with particular demographics.
- There is an ongoing need to engage with indigenous Australians.
- The NCCP needs many voices, beyond its National Coordinator. It is time to start empowering other individuals groups to become advocates for the program.

- The NCCP should further leverage the positive relationships that have been built with natural resource management groups, local government councils, the Water Services Association of Australia and other stakeholder groups.
- The NCCP should work more strategically with federal and state governments to ensure they understand the work of the NCCP and where relevant, become advocates of the messages.
- The NCCP should fully utilise 'Bang the Table' as a controlled channel to effectively engage with stakeholders
- The NCCP should encourage and enable members of the Communications Working Group to effectively build on the current strategic approach through their own channels and programs.

Keywords

[Keywords section needs to include key subject areas and species name (see <u>www.fishnames.com.au</u> for standard fish name)] carp, consultation, virus

Introduction

Seftons was engaged by the Fisheries Research and Development Corporation (FRDC) in June 2017 to undertake a five-month communications program to manage the communications for the National Carp Control Plan (NCCP).

At the time of appointment, the National Stakeholder Engagement and Communications Strategy had already been developed by NCCP, and as such Seftons expanded on the recommendations to form the five-month communications plan.

Communications is a crucial part of the NCCP and aims to assist in educating and informing stakeholders and the wider community about work undertaken by the NCCP. The communications program over the past five months ensured the NCCP was proactive in engaging with stakeholders and the media and that the communications underpinned the broader program activity, ensuring timing and messaging was consistent.

The communications program was not designed to create controversy around the issue of carp reduction, or enter into emotive debate with individual stakeholders. Rather, there had been some conflicting messages released by the Federal Government and the NCCP earlier in the year and this program was designed to realign the messaging and ensure the necessary foundations were laid with key stakeholders, and that each stakeholder understood the purpose of the NCCP, its objectives and scope of work.

The program proactively engaged traditional and digital media to ensure awareness, understanding, engagement and support amongst a wide range of stakeholders. As such, Seftons used an open and measured approach to messaging and engagement. To ensure a consistent approach, key themes and messages underpinned all of the communications outputs.

While the media sets the news agenda, the communications program aimed to influence this with proactive activities.

Seftons also carried out work in stakeholder engagement, and community consultation and engagement, for this program. Those two pieces of work will be reported on separately.

Objectives

According to the Stakeholder Engagement and Communications Strategy "critical to the public engagement and consultation activity will be an effective and targeted communications program which can underpin all activity and garner the community and industry's support and endorsement of the recommendations in the final report".

The overall objectives of the communications program were:

- To inform and engage communities and stakeholders about the NCCP.
- To widely communicate the NCCP process.
- To provide opportunities for community input into the NCCP.
- To support the running of effective, informative and clear public information sessions.
- To support and enhance FRDC's reputation and standing through developing high quality materials related to the NCCP.
- To manage and deliver the project with high professionalism.

The media relations component additionally aimed to:

- Ensure community members were aware they could have input into the NCCP.
- Promote the community consultation sessions.

• Generate positive media sentiment.

Methodology

Managed and tracked the project

Throughout the five month program Seftons worked closely with the NCCP team and held weekly WorkinProgress communications meetings, as well as attended weekly carp team meetings, to ensure objectives were met, key messages were communicated and reactive support could be provided as required. A dedicated core team of communications specialists worked with the NCCP under clearly defined roles.

Devised the implementation calendar

The overarching Stakeholder Engagement and Communications Strategy was used as a basis for activity. A calendar of implementation in the form of a working action plan was developed to ensure the communications program aligned with the consultation and stakeholder engagement activity. This also ensured all outcomes were met at the end of each week and month.

Developed themes and key messages

Seftons worked with the themes of the communication program as contained in the Stakeholder Engagement and Communications Strategy, and developed a series of key messages that underpinned all communication efforts.

Please see Appendix One for the key messages.

Executed the media relations campaign

Seftons scheduled and delivered to NCCP 14 media releases and 26 media alerts related to the NCCP. These were a mix of nationally focused releases and tailored releases to support a regional consultation event.

Having developed a specific national distribution lists along with regionally specific distribution lists, Seftons researched and wrote the releases, arranged approvals, sourced images and then distributed and sold in the releases to the media and facilitated interviews.

Please see Media Items for a list of stories. Please see Appendix Two for the list of media releases and Appendix Three for the media highlights.

Oversaw communication risk and issues management

With potential for a particular stakeholder or media outlet to focus on possible negative impacts of the NCCP program, issues management was considered on a daily basis. Media monitoring occurred on a daily basis, in the morning, with any issues arising from media items immediately shared with the NCCP team and recommendations provided on action to take, if any. Seftons provided the NCCP with information around the stakeholders involved, key messages being communicated and any media exposure. Seftons also provided strategic recommendations and responses on issues that came from specific stakeholders.

Produced the NCCP newsletter

During the period of this project, Seftons was scheduled to write and produce one quarterly newsletter, however as requested by the NCCP, Seftons produced second newsletter to help promote community consultation events. Seftons' role in producing the newsletters included:

- Developing a story list and gaining approval from NCCP.
- Liaising with key NCCP team members to secure information.
- Drafting copy and implementing feedback from NCCP.
- Selecting suitable images.

- Providing recommendations on design.
- Collating feedback for designer.
- Proofreading final copy.
- Providing final copy to NCCP for design and distribution.

Provided materials to update the website

The website was managed by the NCCP's Dr Tom Rayner. Seftons worked closely with Dr Rayner to provide all media materials for upload to the website in a timely fashion (within one hour of distribution to the media). Seftons also provided recommendations as requested on placement of materials on the website and provided written copy as required.

Provided materials for digital and social media

Seftons ensured Dr Rayner received all necessary communications collateral to adapt and communicate through digital media platforms. This was provided within one hour of distribution to stakeholders / media. Seftons also provided recommendations on social media strategy and implementation. Seftons supplied digital content to stakeholders to share on their social media and websites where there was value in promoting the community consultation events further.

Produced communications collateral

Seftons produced a range of communications and marketing collateral for distribution at the community consultation events including:

- General information brochure.
- Local government brochure.
- Carp Fact Sheet.
- Pull up banners for events.

Please see Appendix Four for copies of the communications collateral.

Produced stakeholder engagement materials

As the NCCP increased its external communication and stakeholder engagement, Seftons developed tailored communications materials for internal NCCP use, individual stakeholder or industry groups and researchers. These included:

• Workshop and Community Briefing Session template materials, including:

• An announcement media release • Template newspaper advertisement to be tailored for each regional event • A template radio advertisement script to be tailored for each event

• A graphic designed invitation for NRMs to send to invited workshop

stakeholders o A classified advertisement
Communications and key message summary.

- Local council email and letter.
- Talking points for researchers ahead of media interviews.
- Media spokesperson protocol.
- Edits/copy to newsletters and articles as opportunities arose.
- Seafood Industry Victoria magazine copy.
- Generic copy and images for state/territory websites to promote community consultation.
- Input into FISH Magazine Fact Sheets x3
- Input into Frequently Asked Questions for the website

Commenced engaging with stakeholders

While this will be reported on separately, please note that Seftons began successful engagement with the following stakeholders:

- Federal Government: MPs, Policy Advisors, Media Advisors.
- State Government: MPs, Policy Advisors, Media Advisors.
- Local Government: Mayors, General Managers, Communications Managers, Environmental Officers.
- Natural Resource Management Groups: LLS, CMA etc.
- Commercial Fishers / Recreational Fishers.
- Regional and rural communities.
- Industry Groups: Chamber of Commerce, Tourism Associations, National Farmers' Federation, Future Farmers Network.
- Special Interest Groups: Koi Society, Recreational Fishers, Commercial Fishers.
- Water Asset Managers & Water Authority Representatives.
- Indigenous Groups.
- Fishing Clubs.
- Retailers.
- Community Environment Groups Sustainability Groups, Landcare.
- Farmers, Irrigators.
- Small business owners in regional locations.
- Research Groups such as the Australian Society for Fish Biology.
 Activist groups Animals Australia, RSPCA, change.org, Get Up
 Community Groups Rotary, CWA, Scouts, Lions Clubs.

Coordinated production of animated videos

Seftons recommended a number of animations be developed to assist with the key messages of the NCCP. A third party supplier, The Animation Company, was appointed to produce five 90-second video animations to be used as part of the communication and engagement with stakeholders. Scripts were written by Seftons and approved by NCCP, and feedback provided to the producers. The topics included What is the NCCP?, Muddying the Waters – The problem of carp, Removal methods that haven't worked, The carp virus, Let's talk.

Managed the Communications Working Group

Seftons managed the Communications Working Group (CWG), which provides communication support to the NCCP. The CWG comprises leading communication managers from environment and natural resource agencies and organisations, with expertise in fisheries, pest management, river operations and extension. The group's main role is to contribute to the successful engagement of the Australian community in controlling carp impacts.

Management of the CWG included: facilitating the first meeting, recommending the chair, drafting agendas for each meeting, supplying media materials to the group for feedback and distribution, liaising with members to determine meeting date availability, providing communications updates and engaging with members to share NCCP materials. During the time of this project Seftons attended two face-to-face meetings and one telemeeting of the CWG.

Introduced 'Bang the Table' Engagement Software

Seftons recommended the development of a stakeholder engagement website through Bang the Table to effectively engage with key stakeholders. The effectiveness of the tool will be evaluated in December 2017, with a view to continue use with a wider stakeholder audience in 2018.

Results

The outputs and outcomes of the project include:

- Seamless delivery of communications needs/requirements for the NCCP team.
- Development of a detailed 5-month stakeholder engagement matrix and action plan.

- Effective delivery of a proactive media relations campaign including 4 media releases per month (Seftons delivered 40 media releases/alerts during the project).
- Provide reactive media relations response to media within 24 hours of coverage printed.
- FRDC alerted to potential issues within one hour of being identified by Seftons.
- Two quarterly newsletters produced
- Communication collateral produced including four animated videos, a fact sheet, two DL brochures, pull up banners, Frequently Asked Questions.
- Communications materials delivered to FRDC for upload within one hour of distribution to media/stakeholders.
- Strategic weekly briefing note on communications priority.
- Clear and accurate end of week reporting.
- Fortnightly WIP meetings between Seftons and FRDC to track and manage project delivery (Weekly communications WIP meetings were held and Seftons also attended weekly carp team meetings).
- Quarterly face-to-face meeting with FRDC team in Sydney.
- Participation in internal FRDC meetings as required.
- Strategic approach to stakeholder engagement with commencement of regular and frequent contact.
- Responding to external conditions and amending the project if required.
- Management of Communications Working Group (Seftons attended and assisted in management of three meetings of the CWG).

Specific media outcomes include:

- A total of 620 journalists nationally engaged on a regular basis regarding the NCCP.
- 353 individual news items captured through media monitoring, mentioning the NCCP and carp. These equated to an estimated value of at least **\$1,827,828** (\$1.83 million) in editorial coverage¹.
- The documented media outlet circulation for featured stories was a minimum of 3,884,127 (3.9 million). Most clippings did not have circulation figures recorded (and are therefore not included in that total). This does not include the value of social media coverage.
- Of the 353 items, 215 (61 per cent) were newspaper articles, 104 (30 per cent) items appeared on radio, 15 (4 per cent) were online and 19 (5 per cent) on television.
- There were 19 items which achieved national coverage.
- 267 articles, or 76 per cent, were positive in sentiment, 35 articles, or 10 per cent, were negative and 51 articles, or 14 per cent, were neutral.
- Out of the 353 articles, there were 201 articles as a result of a media release distributed by the NCCP, with 152 coming from other sources.
- NCCP National Coordinator Matt Barwick participated in approximately 60 radio interviews.
- There were 5 articles in *The Land* newspaper, as well as a number of articles in the *Queensland Country Life, Stock Journal* and *Stock and Land*.
- 4 items appeared on ABC Rural and ABC Country Hour.
- There were 3 articles in *The Weekly Times* newspaper.
- State coverage in the Adelaide Advertiser.
- Coverage with a story on *WIN TV* in the ACT.
- Metro coverage on ABC News Sydney and ABC Breakfast programs.

¹ To calculate editorial value, a conservative 'credibility multiplier' of three has been applied to advertising rates based on standard industry recognition of editorial as more credible and comprehensive than advertising. Estimated advertising values are calculated by multiplying column centimetres of editorial media coverage and seconds of broadcast publicity, by the respective media advertising rates.

Discussion

We have made the following observations over the past five months – which have been integral in shaping our strategic recommendations for 2018:

- While it is an obvious statement, robust research is critical to the overall success of the NCCP. The research results must be thorough and conclusive to hold their own in the public domain. Likewise, there is an ever present risk to the validity of the research, should another well respected researcher go public to discredit the findings.
- While the focus of communication to date has been the research projects and planning underway, participants in the recent Victorian workshops all rated recovery of rivers and clean up strategies as the most important aspect of the NCCP moving forward.
- The demographic of men (aged 40+) are most engaged with the program, with a second tier of younger male recreational fishers also engaged. Interestingly, in Dr Jacki Schirmer's latest social research, males were more supportive than females regarding the virus release (77% of male residents living in the Basin supported virus release compared to 63% of female Basin residents).
- Communications tactics need to be traditional and conservative in nature. At the conclusions of the stakeholder workshops to date, the overwhelming preference for ongoing communication from the NCCP is in the form of E-newsletters and traditional media (local newspapers, radio)
- Interestingly, social media was significantly less popular, Seftons attributes this largely to the demographic of those attending the workshops they are less inclined to have or use social media.
- Overwhelmingly, the media report positively regarding the work of the NCCP and its objectives.
- Overall awareness of the issue outside specific stakeholder groups remains relatively low.
- Where there is awareness, it is higher in regional areas than metropolitan areas (where carp are most present).
- There is an ongoing need to engage with indigenous Australians.
- The hearts and minds opportunity remains our strongest approach for 2018 there is a fondness for our waterways and we need to position the NCCP as responding to this sentiment.
- We need many voices, we can't rely on NCCP's National Coordinator to be the only messenger, it is time to start empowering other individuals groups to become advocates for the program.

Implications and Conclusion

The topic of carp control must move from being a niche topic of interest to special interest groups and industry representatives, and move to be a national issue which has relevance and importance to all. The NCCP is not just about ensuring we control a pest species but ensuring the future health of our waterways, which so many communities rely upon.

With the research projects well underway, and the ground work engagement undertaken with the media, local government and recreational fishers, NCCP has an opportunity to increase the scale and reach of communication, as well as adjusting messaging in line with the project's status.

We believe the following tactics present strong opportunities for the NCCP in 2018:

- Broaden communications reach to ensure the issue of carp is on the national agenda.
- Build on the 2017 targeted media approach and consider national and metropolitan media opportunities to help 'tell the story'.
- Position the work of the NCCP as world-class best practice, which is being viewed with interest by international counterparts.
- Further leverage the positive relationships that have been built with natural resource management groups, local government councils, the Water Services Association of Australia and other stakeholder groups.

- Work more strategically with federal and state government to ensure they understand the work of the NCCP and where relevant, become advocates of the messages.
- Utilise 'Bang the Table' as a controlled channel to effectively engage with stakeholders.
- Enable members of the Communications Working Group to effectively build on the current strategic approach through their own channels and programs.

Recommendations

- The NCCP should broaden its communications reach to ensure the issue of carp is on the national agenda. It should build on the targeted media approach from 2017 and consider national and metropolitan media opportunities to help 'tell the story'.
- The 'hearts and minds' opportunity should be the strongest approach for 2018 there is a fondness for waterways and communications need to position the NCCP as responding to this sentiment.
- The NCCP should position its work as world-class best practice, which is being viewed with interest by international counterparts.
- Communications tactics need to be traditional and conservative. Stakeholders have an overwhelming preference for ongoing communication from the NCCP is in the form of E-newsletters and traditional media (local newspapers, radio). Social media is significantly less popular.
- There is an ongoing need to engage with indigenous Australians.
- The NCCP needs many voices, beyond its National Coordinator. It is time to start empowering other individuals groups to become advocates for the program.
- The NCCP should further leverage the positive relationships that have been built with natural resource management groups, local government councils, the Water Services Association of Australia and other stakeholder groups.
- The NCCP should work more strategically with federal and state governments to ensure they understand the work of the NCCP and where relevant, become advocates of the messages.
- The NCCP should fully utilise 'Bang the Table' as a controlled channel to effectively engage with stakeholders
- The NCCP should encourage and enable members of the Communications Working Group to effectively build on the current strategic approach through their own channels and programs.

Further development

Where this project DOES NOT fully solve or address all issues and more research and/or actions such as management changes are required provide recommendations for next steps.

Not applicable to this project.

Extension and Adoption

Outline how the project was (and will continue to be) extended and communicated to the end user, such as managers, other researchers, industry and where applicable the broader community.

If possible outline where project outputs were adopted – this may not always be possible at time of writing the final report.

Not applicable to this project.

Project materials developed

If the project creates any products such as books, scientific papers, factsheets, images these should be outlined in this section outline and attach them where possible.

Council Brochure

General Stakeholder Brochure

What is the National Carp Control Plan?

The National Carp Control Plan (NCCP) is being prepared to explore the possible use of a species-specific virus known as Cyprinid herpesvirus 3 (the carp virus) to control carp. It is a \$15 million program being delivered by the Fisheries Research and Development Corporation (FRDC), on behalf of the Australian Government.

In essence, the NCCP is a program of risk assessment, research, planning and consultation to identify a smart, safe, effective and integrated suite of measures to control carp impacts, with a key focus on possible use of biocontrol.

The NCCP started work in December 2016 and will provide a completed plan to inform decision making by governments - who will decide collectively - at the end of 2018 on how to proceed with carp control in Australia.

European Carp (Cyprinus carpio) were introduced to Australia approximately 180 years ago, established successfully in the 1960s, and now dominate aquatic ecosystems throughout much of southeastern Australia. Carp are now present in every state and the ACT, and are destructive to our natural ecosystems, similar to rabbits and case torate cane toads.

Carp dominate freshwater fish communities in south Car provintiate reservate instruction induces in south-eastern Australia and in many areas they make up 80 per cent of the total weight, or biomass, of fish present. Carp affect the water quality by stirring up sediment with their bottom feeding behaviour, and can outcompete native species for food and resources and displace them through habitat modification.

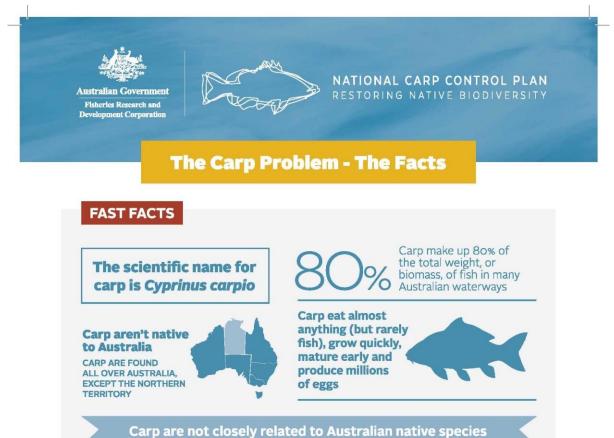

Carp control has been extensively researched worldwide, however significant work is needed to explore whether biocontrol can be used to control carp without causing secondary problems for water quality and other species. The NCCP involves a comprehensive program of research to explore knowledge gaps and risks, and, extensive stakeholder engagement across areas affected by, and with an biterset in carp. and with an interest in, carp.

Research is aiming to find out how integrated carp control could work in Australia, what effect the carp virus is likely to have on carp populations how it can be released, exactly what impact dead carp might have on rivers, and how they could be cleaned up quickly and/or utilised.

Carp Fact Sheet

Carp – What are they?

European Carp, or *Cyprinus carpio*, is an introduced fish species, meaning it is not native to Australia. Carp come from the genus Cyprinus, which contains other fish species such as goldfish and roach. There are no native cyprinids in Australia. The main feature that distinguish carp from other fish is their two pairs of fleshy whiskers, known as barbels, either side of the mouth which they use to find food.

Carp are referred to by many different names including: Common Carp, koi, mirror carp and leather carp. However, they are all referring to the same species (*Cyprinus carpio*).

Carp feed opportunistically on small prey items, aquatic plants and organic matter, grow quickly, mature early, produce millions of eggs and can tolerate extremes of temperature and water quality. This means they can often displace native species.

Carp were introduced to Australia numerous times over the last 180 years, however it wasn't until a strain was released from a fish farm in Victoria in the early 1960s that they became widespread.

Carp are native to Europe and Asia, with the original European Carp said to have been found in the Danube River.

What is the problem with carp?

Carp are considered the worst freshwater aquatic pests in south-eastern Australia, particularly within the Murray-Darling Basin.

Research has shown carp now make up 80 per cent of fish biomass in many waterways in Australia.

Carp have many environmental and economic impacts throughout Australia, including:

- » They are bottom feeders, which means they stir up the sediment in the water, causing muddy or turbid water. This reduces the amount of sunlight reaching aquatic plants, which are also uprooted by their feeding behaviour.
- » The stirred-up sediment smothers vegetation and native fish eggs, which can impact on food availability and reproduction of other fish species.
- » Nutrient level increases caused by carp excretion, can increase the frequency and extent of harmful blue-green algal blooms.
- » Carp displace native fish and impact on the recreational fishing sector, causing some to be listed as rare or threatened.
- » Aquatic ecosystems lose value for a range of uses as water quality declines. Examples include recreational fishing, ecotourism and water treatment.
- » In extreme circumstances, juvenile carp block irrigation pumps and equipment, increasing maintenance.

Where are they found in Australia?

Carp are present in every state and territory in Australia, except the Northern Territory. Carp dominate almost all of the Murray-Darling Basin waterways, except a small number of upland regions that have unsuitable habitat or are upstream of waterfalls or large dams, which act as barriers to colonisation.

Isolated populations of carp are also found in Western Australia, Tasmania, south-east Queensland and some coastal rivers.

What are we doing to address the problem?

The National Carp Control Plan (NCCP) is being prepared to explore the possible release of the carp virus, Cyprinid herpesvirus 3. It is a \$15 million program under the Fisheries Research and Development Corporation (FRDC), delivered on behalf of the Australian Government.

In essence, the NCCP is a program of risk assessment, research, planning and consultation to identify a smart, safe, effective and integrated suite of measures to control carp populations in Australia, with a key focus on possible use of biocontrol.

The NCCP aims to help recover the health of Australian waterways and aquatic biodiversity. The NCCP will be based on thorough and measured approaches, ensuring the benefits and risks of carp biocontrol are understood and the right recommendations are made to government in 2018 to ensure optimum outcomes for Australia.

Appendix One: Key Messages

Themes

The main themes of the communications program were developed from the Stakeholder Engagement and Communications Strategy. The themes were adaptable across all channels to ensure consistency and adoption.

- The following points underpinned the themes:
- Healthy river systems and waterways result in healthier communities.
- Carp impact everyone, we want to solve this challenge together.
- The NCCP is a process, not a foregone conclusion.
- The NCCP is pursuing best practice approaches to identify the most appropriate methods to control carp with significant research, community engagement and planning being undertaken.
- Our waterways are the lifeblood for many regional and rural communities. We must protect them to ensure future prosperity.
- Community, industry and government must work collaboratively to identify and agree on solutions that best meet their needs and minimise disruption to peoples' lives.

Key messages

Key messages ensured consistent communication throughout stakeholder engagement and communication activities. The key messages were adapted from the Stakeholder Engagement and Communications Strategy.

Overarching Key Messages

- The NCCP program is a plan to recover Australian waterways and aquatic biodiversity.
 - The NCCP will be based on thorough and measured approaches ensuring the benefits and risks of the carp virus are understood and the right recommendations are made to governments in 2018 to ensure optimum outcomes for stakeholders.
- Controlling carp will result in improving the health of Australia's waterways.
 - Australia's river systems and waterways are an important ecological and economic powerhouse, providing habitat for a variety of native fish, plants, birds and animals.
 - They are the lifeblood for communities and the industries they support including agriculture, grazing and tourism and offer valuable cultural connections and recreational opportunities including, boating (including houseboats), fishing and a variety of water sports.
 - Over time, cumulative impacts from legacy issues around poor land and water management and more recently the abundance of the pest fish Common carp (Cyprinus carpio) have affected the integrity, health and viability of these ecosystems.
- Carp now make up 80 per cent of the fish biomass in many Australian waterways and up to 93 per cent in some areas.
 - Carp are considered by some to be one of the worst introduced pest species in Australia.
 - Carp are found in every state and territory apart from the Northern Territory and have major negative impact on water quality and the amenity value of freshwater rivers and lakes.
- The Fisheries Research and Development Corporation (FRDC) is leading the \$15 million planning process, on behalf of the Australian Government, to conduct research and determine the most effective methods to reduce carp.
 - o NCCP will deliver its recommendations by late 2018.
 - The NCCP aims to foster the recovery of a variety of native species including fish invertebrates and platypus and their habitats, which are currently being impacted throughout much of Australia by the prevalence of introduced carp.
- The NCCP program is a plan to recover Australian waterways and aquatic biodiversity.
 - The NCCP will be based on thorough and measured approaches ensuring the benefits and risks of the carp virus are understood and the right recommendations are made to Government in 2018 to ensure optimum outcomes for stakeholders.

Key Messages - The Carp Virus

- Australian scientists have determined that a biological control agent, the naturally occurring carp virus, could reduce the number of carp in freshwater systems by more than 70 per cent.
 - The virus is present in waterways in 33 countries and there have been studies demonstrating the only species that will develop the disease caused by the virus is Common carp.
 - Rigorous testing has been conducted with additional testing proposed to provide further assurance and safeguard against any potential unintended risks to Australian native species.
 - o The proposed biological agent to be released does not currently occur in Australia.
- The carp virus is safe for humans.
 - There are no examples of fish viruses causing disease in humans. Testing conducted by the CSIRO, through the Invasive Animals Cooperative Research Centre has found that under optimal conditions the carp virus could kill up to 95 per cent of individual carp in populations that have not seen this virus before. It has been confirmed that Australian carp populations have not been exposed to this virus to date.
- Strict regulatory controls and protocols will need to be met before the virus might be approved for use.
 - Considerable work including further research into ecological impacts and how to manage the disposal of the consequential biomass and community consultation is required.
 - The carp virus will not totally eradicate carp. Additional management interventions will help to supplement the virus and to control residual carp populations over the longer term.
- The NCCP has engaged more than 12 research teams to research options and determine the best solution for our waterways and communities.
 - Research is being undertaken in estimating carp biomass; community and stakeholder attitudes of controlling carp; non-target species testing; comparing genetic bio-control methods and many more.

Key Messages - Consultation

- Carp impacts everyone, we want to solve this challenge together.
 - Extensive consultation is underway across relevant stakeholder groups to ensure the project team are aware of the ecological values of the affected river systems and any likely direct and indirect impacts (including social, environmental, economic, and cultural) that may eventuate from the use of this control method.
 - The NCCP team value the opinions and beliefs of Australian communities impacted by carp and are committed to engaging with as many people as possible to capture such feedback and develop a proposal that best meets the needs of those communities.
- Healthy river systems and water ways result in healthier communities.

Appendix Two: Media Relations Outputs

Media Relations Outputs

During the reporting period 14 media releases were distributed (or are waiting to be distributed at an appropriate time) nationally. In addition 26 media alerts were distributed before each consultation.,

The following media releases and media outputs have been distributed or have been written ready to be distributed:

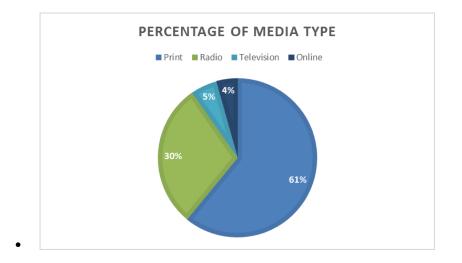

- Media Release 1 Research forms parts of the process
- Media Release 2 Ricegrowers' Association event (held)
- Media Release 3 Risk assessment research
- Media Release 4 Cost benefit analysis research

- Media Release 5 Anoxia risk research
- Media Release 6 Biomass research
- Media Release 7 Community consultation national release
- Media Release 8 Community briefing session on carp control (template for each NRM)
- Media Release 9 Carp spawning event in Gippsland Lakes
- Media Release 10 Duck and carp research (awaiting approval)
- Media Release 11 Epidemiology modelling research (awaiting approval)
- Media Release 12 Clean-up strategies research (awaiting approval)
- Media Release 13 Options for utilising carp research (awaiting approval)
- Media Release 14 Social science research (awaiting approval)
- 26x Media Alerts Pre-community consultation alert to invite media, tailored to each town location
 Radio script – Community briefing session promotion script (template for each NRM
 region).

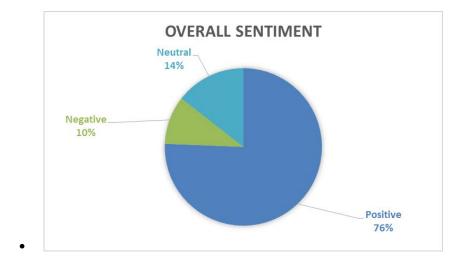

Appendix Three: Media Highlights

TRADITIONAL MEDIA HIGHLIGHTS

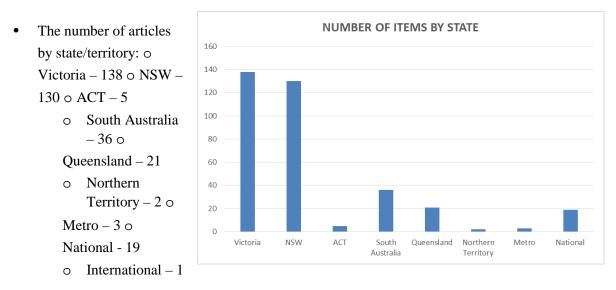

- 353 individual news items were captured through media monitoring, mentioning the NCCP and carp.
- The 353 items equated to an estimated value of at least **\$1,827,828** (\$1.83 million) in editorial* coverage.
- Of the 353 items, 215 (61 per cent) were newspaper articles, 104 (30 per cent) items appeared on radio, 15 (4 per cent) were online and 19 (5 per cent) on television.

- There were 19 items which achieved national coverage.
- 267 articles, or 76 per cent, were positive in sentiment, 35 articles, or 10 per cent, were negative and 51 articles, or 14 per cent, were neutral.

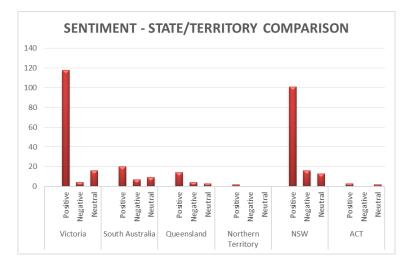

• Out of the 353 articles, there were 201 articles as a result of a media release distributed by the NCCP, with 152 coming from other sources.

The sentiment by state/territory: o Victoria – 85 per cent positive, 12 per cent neutral, 3 per cent negative o NSW – 78 per cent positive, 10 per cent neutral, 12 per cent negative o ACT – 60 per cent positive, 40 per cent neutral o South Australia – 56 per cent positive, 25 per cent neutral, 19 per cent negative² o Queensland – 67 per cent positive, 14 per cent neutral, 19 per cent negative o Northern Territory – 100 per cent positive.

0

² South Australia recorded a higher negative result than any other region due to an early issue with a group of Council Mayors. A group of councils in the SA region were concerned that ratepayers would be burdened with the cost of the clean-up and as such took their concerns to the media. The issue received coverage which contributed to the higher negative result. Seftons, together with NCCP were quick to contact Mayors and seek a meeting to clarify misunderstandings. This eliminated the issue and stopped the negative media coverage. Ongoing engagement with local councils has avoided any further incidents.

- National, state and regional radio stations, including ABC Country Hour have been approached. NCCP National Coordinator Matt Barwick has participated in approximately 60 radio interviews to discuss science, stakeholder engagement activity, the NCCP program and the benefits of carp biocontrol.
- There were 5 articles in *The Land* newspaper, as well as a number of articles in the *Queensland Country Life, Stock Journal* and *Stock and Land.*
- 4 items appeared on ABC Rural and ABC Country Hour.
- There were 3 articles in *The Weekly Times* newspaper.
- State coverage in the Adelaide Advertiser.
- Coverage with a story on *WIN TV* in the ACT.
- Metro coverage on ABC News Sydney and ABC Breakfast programs.
- A total of 620 journalists nationally were engaged on a regular basis regarding the NCCP when media releases were distributed.
