1. Introduction

Background

In 2018 the Australia Seafood Industry established a national peak industry body – Seafood Industry Australia (SIA). SIA's charter is to manage issues of national significance to the seafood industry.

The current functional capability (staff, funding, systems, networks) of the SIA organisation is limited as it establishes itself as the leader in a new national seafood industry governance structure. In this early stage SIA is significantly reliant on its members and seafood stakeholders, whose existing capacity and capability range widely across many seafood issues. However, several existing mature seafood organisations have developed and now hold significant professional capability in key areas relevant to their respective needs and to SIA's charter.

The following points summarise the project brief and objectives.

a. What is the Problem?

- The Australian seafood industry (commercial wild catch fishers, aquaculture farmers, and seafood partners) is geographically large, and diverse in fisheries, species, jurisdictions and markets.
- Diversity is fundamental to seafood enjoyment. But diversity also demands many organisations to run our industry - each with unique capacity (resources, funds, skills), capability (networks, strategies motivations) and services to members.
- The Problem for the seafood industry is that no single seafood organisation has the capacity, capability or networks to address the big issues we all seafood organisations.
- In 2018 Industry stepped up and established SIA to resolve this diversity problem and lead the industry on the big national issues.
- The SIA Board charter is - to lead, identify, manage, and prosecute national policies and issues on our behalf to best long-term advantage for Industry members. Key FUNCTIONS have been established as the delivery platforms.
- The range of national challenges industry faces is large and growing. And SIA alone does not have the inhouse resources, capacity or capability to address this problem or implement preferred solutions.
- But collectively through sharing our state and sectoral resources in a national partnership we can access considerable capacity to mount solutions to the challenges we face.

b. What is the Impact of the Problem?

- Fragmented capacity leads to suboptimal performance and service delivery. Important seafood issues cannot and will not get managed or resolved to best advantage for the industry.
- And service benefits to members is not yet on our radar. Other industries (meat, dairy, horticulture) have built structures to leverage services dividends (safety, insurance, bulk buying) for members. We should be doing this.
- Every day an issue goes unmanaged or a service opportunity unleveraged, means loss of social and economic capital by seafood operators.

c. What Resources are available?

- As a "national seafood industry" we include all commercial participants in our whole value chain, both in and out of the water. We all benefit if this chain can be made more efficient, resilient and responsive to markets and opportunities.
- The Australian seafood industry has deep and unique resources, capacities and capability. These are variously held in the hands of individual seafood organisations across Australia. The scope of our organisations is deep and wide.
- This capacity and capability is manifest as skilled people and experts, industry and sectoral management systems, technology and financial resources, industry knowledge, and networks with industry, agencies and external parties.

d. What is Proposed Now?

- SIA will map and lead member organisations to build joint capability in two ways:
 - 1. Identify the functions and services to be delivered at a national and regional level across the industry.
 - 2. Work out how to deliver these functions using existing capacity and capability contributed by industry.
- A joint FUNCTIONAL CAPABILITY approach will identify organisations with a LEAD Capability ("3" below), relevant SUPPORT Capabilities ("2"), and PARTICIPANTS ("1").

- A joint SERVICE INFRASTRUCTURE approach should only create a new seafood service where it delivers a compelling financial and economic advantage to the seafood industry.

e. Objectives

The objective of this project is to: (to be confirmed)

- Map the organisational capacity and capability based on consultation with leading seafood organisations,
- Provide data to FRDC and SIA regarding the assessment of capability options for SIA,
- Establish a spreadsheet tool to enable ready updating and analysis of seafood functions in the future.

Methodology

This project has been established by SIA and FRDC to engage with ~40 leading seafood organisations regarding their capacity and capability. The project has documented their current capacity and capability across a range of existing and emerging seafood risks and challenges. The project has been conducted by Ewan Colquhoun from Ridge Partners, an independent consulting firm, based on brief telephone interviews in April 2019.

a. Functional Areas

The review and consultation have been undertaken based on an optimum template of functions that a capable seafood organisation would undertake in servicing its members. The range of these functions is dynamic, based on the variability of key seafood industry risks and related issues over time.

Of course, organisation must balance their capability and functional service delivery against available financial and other resources, and available time to implement the services. All organisations noted in discussion that they could do a lot more functions if they had more resources and time.

The review anticipated consultations with the Recreational and Indigenous Fishing sectors, as they are fellow fishery users of the aquatic resource. Contact with these organisations has not yet been possible.

The functions chosen for this report have been established to cover the range of organisations that exist in the industry and the service environment they support. As presented in the table above, the key organisations consulted have been classed under four headings according to their dominant service contracts: Peak Body; Seafood jurisdiction; FRDC-IPA; Key Fishery; and National Issue Leaders.

Thirty-six discrete seafood organisation Functional Areas have been identified based on discussion with FRDC, SIA and industry organisations. This is a starting list and can be amended and improved subject to industry refinement. These areas have been assembled under six headings:

1. Sustainable Aquatic Environment

- a. Aquatic environment
- b. Marine species and status
- c. Animal health
- d. Biosecurity
- e. Climate change

2. Community Endorsement of Seafood Industry

- a. Community engagement and perception
- b. Recreational community relations
- c. Indigenous community relations
- d. Industry Public Relations and Image Promotion

3. Resource Allocation, Access and Use

- a. Resource access
- b. Marine Oil & Gas interface
- c. Marine parks
- d. IUU Fishing in Australian waters
- e. Harvest processing and viability
- f. Digital technology – radio, logbooks, VMS, etc

4. Human Capacity

- a. Leadership and skills
- b. Employment and labour relations
- c. Work safety
- d. Mental health

5. Seafood Supply, Markets and Trade

- a. Seafood product standards
- b. Domestic supply and access
- c. Domestic marketing and promotion
- d. Export market supply and access
- e. Export marketing and promotion
- f. Import supply and access
- g. Import marketing and promotion
- h. Seafood freight and logistics
- i. Aquatic animal welfare
- j. Country of Origin labelling
- k. Seafood safety
- l. Communication of status and risk

6. Industry RD&E

- a. Industry strategy and planning
- b. Precompetitive industry investment
- c. Industry productivity
- d. Liaison and reporting to Government and others
- e. International networks and 3rd Parties.

These functional areas have been adjusted and progressively refined based on advice from seafood industry participants. Further discussion, amendment and refinement is necessary to enable a clear and concise portfolio of functions in the joint hands of SIA and seafood organisations. In many cases these refinements are expressed as specific issues and risks (e.g. social license, fuel tax credits) that are faced by the industry. These specific issues have been identified where relevant in the analysis below.

b. Organisational Responses

Each organisation was consulted via a 15-20 minute phone conversation regarding their existing organisational resources, capability and options. Data was recorded and collated onto a common data based, then used for analyses. No organisation requested that its information be kept confidential by the consultant.

Organisations ranked their capacity and capability on a score (high / medium / low) according to the following standard:

- 3 = Capability and desire to jointly **lead** with SIA on a specific function at a national level,
- 2 = Capability and desire to **support** SIA and seafood organisations in managing a specific function at a national level,
- 2 – Capability and desire to **participate** with SIA and seafood organisations in a national functional area.

c. Data Limitations

Care should be taken in reviewing this data.

The range of capacities, capabilities and risks, across the seafood industry organisational landscape is very broad. Establishing a 36-point score card that accurately captures all the capabilities of 40 or more organisations is quite a challenge.

This data is “raw” as expressed by respondents. It has not been normalised across sectors, fisheries or jurisdictions. For example, one organisation may perceive a higher baseline rating for a score of 2 than another organisation choosing a score of 2. Interpretation of this data should be undertaken with care.

d. Key Issues

1. SIA Leverage

All organisations contributing to this project to date have verbally confirmed (to the consultant) their aspiration and support for a better, stronger SIA, for the mutual benefit of all seafood organisations and stakeholders. But many also noted that if they had more resources (\$, FTEs, etc) locally they could do more and deliver better outcomes for their stakeholders.

So, the question has arisen as to the scale and scope of the additional synergies and leverage that SIA can achieve regarding difficult seafood issues. Why would a regional or fishery seafood organisation join with SIA if they perceive they can resolve their issue locally quicker and at lesser margin cost?

Clearly some high-level issues (e.g. social license, animal health, biosecurity) are far better addressed at a national level where media, legislation or national impacts reside. But for other issues, many organisations want a clearer understanding of the national priorities SIA will address, how SIA will recognise and remunerate contributions from seafood organisations, and how the benefits of scale and national leverage will flow to local organisations. The boundaries (both management and resourcing) between national and local issues need to be discussed and agreed.

2. Who Pays?

A frequent question raised by respondents relates to who will pay the costs for individual organisations that jointly lead or support SIA on national issues.

An organisation with a national capability (e.g. WAFIC for 3rd party accreditation; STAG for China FTAs, SafeFish for seafood safety) should not be expected to foot the total national cost of their contributed human capacity and resources to assist SIA.

A funding equity formula must be on the agenda for the upcoming seafood organisation workshop.

3. Transporting the Capability

Specific knowledge of key risks and related functions is one common asset possessed by seafood organisations. For each organisation these capabilities are finetuned to address local risks and achieve local outcomes.

But the utility of those unique organisational capacities and capabilities may diminish when transferred to a national context that is subject to different governance structures and challenges. As one leading organisation noted, the capability to do things outside their local remit is often very limited.

SIA therefore needs to work with members and seafood organisations to ensure the optimum transportability of mature local capabilities to a national stage.

2. Seafood Organisation Capability

List of Organisations

Responses from Seafood Industry organisations confirm the following financial and staff capacities, and entity structures. Some organisations have not yet been able to respond due to other commitments.

| Industry Group | | | Association Name | Operating Budget p.a. | No. of FTEs | Entity type | Consultation Status |
|------------------------|------------------------------|-------------|--|---------------------------------|--------------|-------------------|---------------------|
| Peak | 1 | SIA | Seafood Industry Australia | \$500k-\$1m | 0-2 | Incorporated Assn | |
| Jurisdictional Bodies | 2 | NAC | National Aquaculture Council | \$250-500k | 0-2 | Incorporated Assn | Complete |
| | 3 | QSIA | QLD Seafood Industry Assn | \$50-100k | 0-2 | Incorporated Assn | Complete |
| | 4 | NSWPFA | NSW Professional Fishermens Assn | \$250-500k | 0-2 | Incorporated Assn | Complete |
| | 5 | SIV | Seafood Industry VIC | \$250-500k | 0-2 | Incorporated Assn | Complete |
| | 6 | TSIC | TAS Fishing Industry Council; | \$500k-\$1m | 3-5 | Incorporated Assn | Complete |
| | 7 | WFSA | Wildcatch Fisheries SA | \$100-250k | 0-2 | Incorporated Assn | Complete |
| | 8 | WAFIC | WA Fishing Industry Council | >\$1m | >10 | Incorporated Assn | Complete |
| | 9 | NTSC | NT Seafood Council | \$500k-\$1m | 0-2 | Incorporated Assn | Complete |
| | 10 | CFA | Commonwealth Fisheries Assn | | | | |

| 15 | | APFA | Australian Prawn Farmers Assn | \$100-250k | 0-2 | Incorporated Assn | Complete |
| 16 | | ASBTIA | Australian Southern Bluefin Tuna Assn | \$500k-\$1m | 3-5 | Incorporated Assn | Complete |
| 17 | | OA | Oysters Australia | \$50k-\$100k | 0-2 | Incorporated Assn | Complete |
| 18 | | PPA | Australian Pearl Producers Assn | \$250-\$500k | 0-2 | Incorporated Assn | Complete |
| 19 | | SRL | Southern Rocklobster Ltd | \$500k-\$1m | 0-2 | Incorporated Assn | Complete |
| 20 | | TSGA | TAS Salmon Growers Assn | | | | |
| 21 | | WRLC | Western Rocklobster Council | | | | |
| Other Key Fisheries | 22 | TA | Tuna Australia | \$100-\$250k | 0-2 | Incorporated Assn | Complete |
| | 23 | SETFIA | South East Trawl Fishing Industry Assn | | | | |
| | 24 | SGWCPA | Spencer Gulf & West Coast Prawn Assn | | | | |
| | 25 | QSMA | QLD Seafood Marketers Assn | | | | |
| | 26 | SFA | Southern Fishermens Assn | \$100-\$250k | 0-2 | Incorporated Assn | Complete |
| | 27 | VRLA | VIC Rocklobster Assn | <\$50k | 0-2 | Incorporated Assn | Complete |
| | 28 | TACL | TAS Abalone Council Ltd | \$250-\$500k | 0-2 | Incorporated Assn | Complete |
| | 29 | TRLFA | TAS Rocklobster Fishermens Assn | | | | |
| | 30 | AAA | Abalone Assn of Australasia | | | | |
| | 31 | ACWA | Aquaculture Council of WA | \$50-\$100k | 0-2 | Incorporated Assn | Complete |
| National Issue Leaders | 32 | SafeFish | National Food safety Initiative | \$250-\$500k | 0-2 | Incorporated Assn | Complete |
| | 33 | STAG | Seafood Trade Advisory Group | \$100-\$250k | 0-2 | Project Group | Complete |
| | 34 | SFM | Sydney Fish Market | >\$1m | >10 | Private Company | Complete |
| | 35 | SIAA | Seafood Importers Assn of Australasia | \$100-\$250k | 0-2 | Incorporated Assn | Complete |
| | 36 | Corporate | Leading seafood companies | | | | |
| | 37 | SeSAFE | National Work safety Initiative | | | | |
| | 38 | Ocean Watch | National seafood Sustainability Initiative | \$500-\$1m | 6-10 | Charity | Complete |
| | 39 | WISA | Women in Seafood Australasia | <\$50k | Volunteer | Incorporated Assn | Complete |
| Other | 40 | ARFF | Australian Recreational Fishing Foundation | | | | |
| | 41 | IRG | Indigenous Reference Group of the FRDC | | | | |

Based on estimated midpoints for the financial and staff resources in the table above, the Seafood Industry has an aggregate annual operating budget of ~\$14 million and 78 FTEs.
